

I look after everyone else!

The queen is the only bee that lays eggs. She does this day and night and it is her only job.

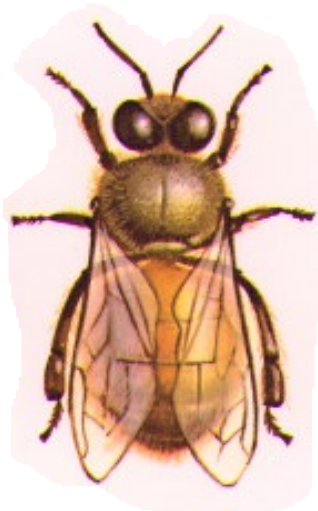

I am the Biggest bee in the Hive!

Who lives in a Hive?

The worker bees basically do all of the work. They collect nectar, make honey, royal jelly and bee bread, make cells, clean the hive, protect the hive and care for the drones

The drones are male bees. Their only job is to mate with the queen. Worker bees even bring them their meals.

I mate the Queen and have the biggest eyes and wings
